Finalisation of the web-application for low-educated and low-skilled adult learners

Partners are finalising work on the web-application which will be soon available through the project website in all language versions. Now the application is ready in English version under this link: https://learnersmot2-frontend.herokuapp.com/

The app uses thinking and game mechanics in a non-game related context to enhance user's engagement and learning. The games/exercises aim to improve the following skills of adult learners:

- reading and writing
- spelling
- mathematics
- problem-solving
- communication
- learning how to learn.

LearnersMot2 Resource Library

The last project result, resource library, has been created by project partners in order to equip adult educators with educational materials on following topics:

- Motivation strategies
- Learning techniques - learning how to learn
- Content creation
- Practical activities
- Evaluation methods
- Technology and ICT tools in adult education.
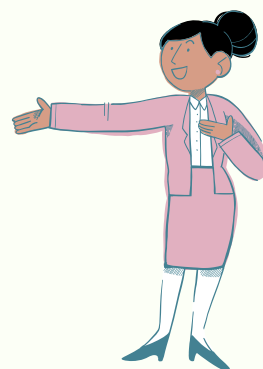

All resources are free and easily accessible. They will be soon available on our project website: https://learnersmot2.eu/.
Stay tuned!

Training in Ljubljana and next activities

In May 2022 partners and adult educators met in Slovenia to take part in the training acitivity. They conducted sessions presenting modules from the LearnersMot2 course and together tested the web-application. They also had time to visit the beautiful city of Ljubljana!

Since the end of the project implementation is approaching, partners are planning and already organising promotional activities:

- local workshops to disseminate what they had learned during the training activity
- blended-learning course for adult educators, consisting of two face-to-face sessions and self-study.

You can find more information on how to take part in the workshops and blended-learning course on partners' social media and LearnersMot2 Facebook!
